

SOCIAL SECURITY AND MEDICARE WORK FOR PUERTO RICO

Our *Social Security, Medicare and Medicaid Work for America* series of reports is written for public officials, members of the press, advocates and other concerned citizens. In addition to providing information about each program's history, character and vitality, as well as relating compelling, real-life stories, every report includes statistics about the number of people who receive benefits, the types of benefits they receive, and the total amount of funds flowing from these programs into a particular state, including its congressional districts and counties. Reports are available online for all 50 states, Washington D.C., Puerto Rico, American Samoa, Guam, the Northern Mariana Islands and the U.S. Virgin Islands. A national report, "Social Security Works for the United States," is also available.

Please note that a short fact sheet summarizing the data in this report can be found at the end of the report, directly following the endnotes.

ACKNOWLEDGMENTS

Like our Social Security, Medicare and Medicaid systems, this report is the product of the foresight and hard work of many people. Social Security Works partnered closely with the Alliance for Retired Americans, who is coordinating the release of this report across the country, with assistance from People Demanding Action.

Many people shared in writing, designing and producing this, our sixth set of state reports. We are especially grateful to Benjamin Veghte, Ph.D., Director of Policy and Research at Social Security Works (SSW), the lead researcher, whose commitment to excellence drove the project to its successful conclusion. Likewise, the outstanding contributions of Stephanie Connolly, SSW's Policy and Research Associate, including drafting the appendices and compiling and verifying data, were crucial to its completion. Michael Phelan, SSW's Deputy Director, managed the actual production of the report. We thank Josh Goldberg, policy and research intern, for producing the figures and proofreading the entire report. We also thank Linda Benesch, Communications Associate, for proofreading the report.

Very importantly, we want to thank Gus, Suzie, Ruby and Mike for sharing their stories and views about the importance of Social Security to their lives. Graphic design was provided by Deepika Mehta.

Social Security Works also benefited from the work and commitment of several people who provided original research and analysis for this report. We would like to thank Dr. Roberto Gallardo of the Mississippi State University Extension Service for sharing with us his categorization of metropolitan and non-metropolitan counties in each state. Arloc Sherman, Danilo Trisi and Kate Kemmerer of the Center on Budget and Policy Priorities generously shared with us unpublished calculations on the number of seniors in various demographic groups lifted out of poverty by Social Security in 2013. We thank Christian Wolfe at the Center for Medicare and Medicaid Services' (CMS) Office of the Actuary for county-level Medicaid enrollment data.

We also thank several Medicare and Medicaid experts for their thoughtful review of this report. Juliette Cubanski, Julia Paradise and Shannon Griffen of the Kaiser Family Foundation, David Lipschutz of the Center for Medicare Advocacy, Stacy Sanders of the Medicare Rights Center, and Christian Wolfe of CMS, all provided helpful feedback on early drafts. Any remaining errors, and all interpretations of the data, are our own.

We hope the report is useful to you as you work to strengthen Social Security in its 80th anniversary year, and Medicare and Medicaid in their 50th anniversary years. Please contact our Communications Director, Lacy Crawford (lcrawford@socialsecurityworks.org), if you have questions about the report.

Alex Lawson
Executive Director, Social Security Works

The Alliance for Retired Americans is a grassroots organization representing more than 4 million retirees and seniors nationwide. Headquartered in Washington, DC, the Alliance's mission is to advance public policy that protects the health and economic security of older Americans by teaching seniors how to make a difference through activism. Learn more about The Alliance and its work at www.retiredamericans.org.

The mission of Social Security Works is to protect and improve the economic status of all Americans, especially disadvantaged and at-risk populations, and, in so doing, to promote social justice for current and future generations of children as well as young, middle-aged and older adults. www.socialsecurityworks.org.

The Strengthen Social Security Coalition is made up of more than 320 national and state organizations, representing more than 50 million Americans. The Coalition is united around core principles, which include that Social Security benefits should be expanded, and the belief that our nation's Social Security, Medicare and Medicaid systems are fundamental to the well-being of America's families and to the type of nation we are. www.strengthensocialsecurity.org.

INTRODUCTION AND SUMMARY

"We can never insure one-hundred percent of the population against one-hundred percent of the hazards and vicissitudes of life. But we have tried to frame a law which will give some measure of protection to the average citizen and to his family against the loss of a job and against poverty-ridden old age. This law, too, represents a cornerstone in a structure which is being built but is by no means complete. It is a structure intended to lessen the force of possible future depressions. It will act as a protection to future Administrations against the necessity of going deeply into debt to furnish relief to the needy. The law will flatten out the peaks and valleys of deflation and of inflation. It is, in short, a law that will take care of human needs and at the same time provide for the United States an economic structure of vastly greater soundness."

—FRANKLIN D. ROOSEVELT, August 14, 1935

In 1935, when President Franklin D. Roosevelt signed the Social Security Act into law he called it a cornerstone, the foundation, of a structure to be maintained and built upon by and for future generations. Social Security could not protect all Americans against every risk, but, as the President said, it could lessen the consequences of lost earnings in old age for workers and their families.

Since then, we have built our Social Security structure carefully and deliberately, first adding life insurance for survivors in 1939—initially for widows and dependent children, but eventually extended to widowers as well. Disability Insurance benefits were added in 1956, followed by Medicare and Medicaid in 1965. Important inflation protection—the automatic cost of living adjustment—was added in 1972, designed to maintain the purchasing power of benefits no matter how long someone lives. We built, maintained and strengthened these institutions for a reason—to enable working men and women to protect themselves and their families. We built them because we, as a nation, value hard work, personal responsibility, human dignity and caring for our parents, our children, our spouses, our neighbors and ourselves.

This report reveals the success of these institutions for Puerto Rico and the nation. The numbers tell part of the story—how many people receive benefits in Puerto Rico, in its congressional districts and counties; how many dollars flow into these jurisdictions in a year; the types of benefits and the types of people who receive those benefits. Perhaps more importantly, the report presents the stories of hard-working Puerto Ricans and their families whose lives have been made immeasurably better by the protections they have earned.

As you read through this report, we urge you to think of the people you know. Family members who live in dignity in old age because they can count on a Social Security check, each and every month—checks they or another family member have earned. Think of that older person who has Medicare, and with it the peace of mind that he or she can receive medical care without going bankrupt.

Think, too, of how these institutions, like the nation's highway system, are part of a rich legacy of those who came before, a legacy that keeps working in good times and bad. Throughout the difficult years of the Great Recession and its aftermath, Social Security

and Medicare have been even more vital than before for Puerto Rico residents, and the lifeblood of many small businesses, hospitals, nursing homes and home caregivers. Virtually all of the jobs these programs

support stay in America. Figure 1 summarizes the positive impact our Social Security and Medicare systems are having on the people and economy of Puerto Rico.

FIGURE 1

Impact of Social Security and Medicare on the Economy and Population of Puerto Rico

PROGRAM	BENEFICIARIES IN PUERTO RICO	PERCENT OF RESIDENTS RECEIVING BENEFITS	AVERAGE BENEFIT	TOTAL ANNUAL BENEFITS ¹
Social Security	845,860	23.8 percent	\$10,070	\$8.5 billion
Medicare	693,652	18.9 percent	–	–

The most recent data available for total annual benefits by state are FY 2013 for Medicaid, and FY 2009 for Medicare. Data on Medicare benefits in Puerto Rico are not available.

SOCIAL SECURITY WORKS

As we celebrate the 80th anniversary of the enactment of Social Security, it is time to recall the contributions our Social Security system has made to American economic security. For 80 years, even as our nation has endured wars, political crises and severe economic recessions, Social Security has never missed a payment; it has paid every dollar of earned benefits, on time and in full.

Social Security Made Dignified Retirement Possible for the Broad Middle Class

Before the creation of Social Security, poverty among older Americans was pervasive. In 1934, President Roosevelt's Committee on Economic Security estimated that "at least one-half" of all Americans aged 65 and older were poor.¹ These seniors had to rely on family, friends and private charity for support—or literally, go to the poor house. In addition to short-term measures designed to address the immediate crisis, F.D.R. introduced Social Security old-age insurance in 1935 to ensure that both current and future generations of Americans would enjoy a

measure of security in their later years. By 1959, when the Census first began to officially count the poor, poverty among older Americans had declined to 35 percent [Figure 2].

And poverty among seniors continued to fall throughout the rest of the 20th century—to 25 percent by 1970 and about 10 percent in 2000, where it has hovered ever since, as measured by the official federal poverty line.² Research suggests that the entire decline in elderly poverty between 1967 and 2000 can be attributed to the maturation and expansion of the Social Security program.³

Social Security provided \$848 billion in benefits in 2014 to 59 million beneficiaries—nearly 1 in 5 (18.3 percent) Americans.⁴ It is important to recognize that Social Security is more than a retirement program for seniors. Nearly 17 million people under age 65 received Social Security benefits in 2014—about 2 in 7 (28.7 percent) beneficiaries.⁵

In fact, Social Security is the nation's largest and, despite its modest benefits, most generous children's program. The vast majority of America's children are protected against financial destitution in the event of the death, disability, or old age of workers on whose support they depend. As a consequence of Social Security's protections, there were an estimated 8.5 million children under age 18 receiving Social Security benefits in 2014, 11.6 percent of all children.⁶ These included an estimated 3.2 million children who received Social Security benefits directly, and an additional 5.3 million children who lived in households where all or part of the income of the household came from Social Security. In addition to these children under age 18, there were 140,000 student children aged 18-19, as well as 1.0 million disabled adult children in 2014.⁷

Social Security benefits are modest: the average annual Social Security benefit for all beneficiaries was \$14,375 in 2014, and \$15,943 for retired workers.⁸ Despite their modest size, Social Security's benefits are vital for the vast majority of beneficiaries, young and old alike. Almost two-thirds (64.6 percent) of elderly beneficiaries relied on Social Security for half or more of their income in 2012.⁹ The program lifted 22.1 million Americans out of poverty in 2013, including 1.2 million children.¹⁰

Social Security Provides Critical Protection against Lost Wages Due to Disability

Social Security Disability Insurance (DI) provides insurance against a risk faced by all Americans: the experience of a life-changing disability that renders one unable to support oneself through work. When workers who have paid into Social Security become incapable of substantial work, as defined by the program's strict eligibility criteria, they can expect to have, as a result of their work and Social Security contributions, a portion of their wages replaced by DI. For these disabled workers and their families, Social Security is a lifeline. Social Security's DI benefits provide 75 percent of the income or more for nearly 6 in 10 non-institutionalized beneficiaries.¹¹ Nonetheless, 1 in 5 DI beneficiaries remains in poverty.¹²

GUS, Wisconsin

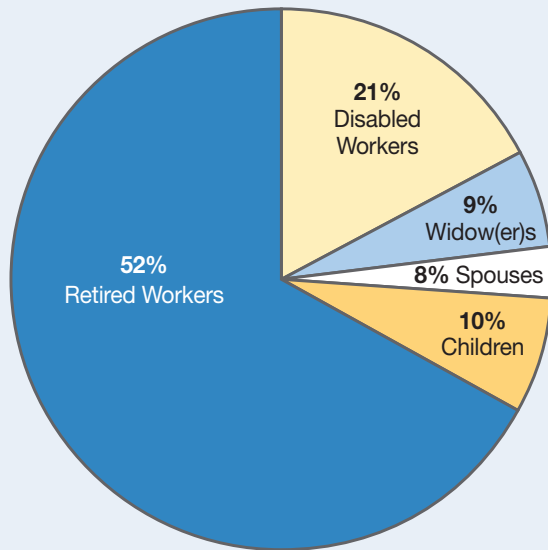

Gus was a "tunnel rat" in Vietnam—one of the volunteer Army infantrymen who specialized in entering the web of narrow tunnels created by the VietCong. The tunnel rats would kill enemy soldiers hiding there and plant explosives to destroy these underground avenues of guerilla warfare.

For his service in this capacity he was awarded the Silver Star, the third highest decoration for valor given by the Army. Sixteen days after he was mustered out of the Army, he returned to his home in Wisconsin—and was in a serious car crash, sustaining a high-level spinal cord injury.

Because his injury was sustained outside military service, he was not eligible for service-connected disability compensation and had to turn to Social Security Disability Insurance. "To put it quite simply," he says, "SSDI was a life saver."

Through their hard work and Social Security contributions, nearly all American workers earn Social Security's retirement, disability and survivorship protections for themselves and their families. Social Security is the primary disability and life insurance protection for most Puerto Rico workers. A 30 year old worker with a spouse and two young children, earning \$30,000-\$35,000, receives Social Security insurance protections equivalent to disability and life insurance protections worth about \$631,000 and \$612,000, respectively.¹³ Today, 212 million working Americans have earned Social Security's protections for themselves and their families.¹⁴

FIGURE 3
Puerto Rico's Social Security Beneficiaries, 2014

Source: Social Security Administration, 2015

There is a significant chance that a worker will need Social Security's disability and/or survivor protections before he or she retires. Nationwide, just over 1 in 4 people who turned 20 in 2013 are projected to become severely disabled during their working years.¹⁵ And 1 in 8 of today's 20-year olds are projected to die before reaching retirement age.¹⁶ Taken together, this means that roughly 1 in 3 young adults entering the workforce today will die or become disabled before reaching the full retirement age.¹⁷ Social Security provides peace of mind throughout the life span, insuring families against lost wages due to old age, disability or death.

Social Security Works for Puerto Rico's Residents and Economy [Figure 1]

- Social Security provided benefits to 845,860 Puerto Ricans in 2014, around one-quarter (23.8 percent) of residents.¹⁸
- Puerto Ricans received Social Security benefits totaling \$8.5 billion in 2014.¹⁹

- The average Social Security benefit in Puerto Rico was \$10,070 in 2014.²⁰

Social Security Works for Puerto Rico's Seniors²¹

- Social Security provided benefits to 435,569 of Puerto Rico's retired workers in 2014, half (51.5 percent) of beneficiaries [Figure 3].²²
- The typical benefit received by a retired worker in Puerto Rico was \$9,815 in 2014.²³

Social Security Works for Puerto Rico's Women

- Social Security provided benefits to 409,432 Puerto Rico women in 2014, 2 in 9 (22.1 percent) Puerto Rico women.²⁴
- Social Security provided benefits to 69,047 Puerto Rico spouses in 2014, 1 in 12 (8.2 percent) beneficiaries [Figure 3].²⁵

Social Security Works for Puerto Rico's Widow(er)s

- Social Security provided survivors benefits to 77,656 Puerto Rico widow(er)s in 2014, 1 in 11 (9.2 percent) Puerto Rico beneficiaries [Figure 3].²⁶
- The typical benefit received by a widow(er) in Puerto Rico was \$8,603 in 2014.²⁷

Social Security Works for Puerto Rico's Workers with Disabilities²⁸

- Social Security provided disability benefits to 179,266 Puerto Rico workers in 2014, 1 in 5 (21.2 percent) Puerto Rico beneficiaries [Figure 3].²⁹
- The typical benefit received by a disabled worker beneficiary in Puerto Rico was \$11,567 in 2014.³⁰

Social Security Works for Puerto Rico's Children

- Social Security is the primary life and disability insurance protection for 98 percent of Puerto Rico's 772,752 children.³¹
- Social Security provided benefits to 84,322 Puerto Rico children in 2014, 1 in 10 (10 percent) Puerto Rico beneficiaries [Figure 3].³²
- Social Security is the most important source of income for the 127,305 children living in Puerto Rico's grandfamilies, which are households headed by a grandparent or other relative.³³

Social Security Works for Immigrants

- Social Security is critical for immigrants, of whom 7 in 10 (71.5 percent) are Latino or Asian American in 2013.³⁴
- New immigrants tend to have lower career earnings, so Social Security is likely to be a larger source of retirement income for them. Nationwide, the median household income of foreign-born residents was \$47,753 in 2013, 10.8 percent lower than the median for native-born Americans, which was \$52,910.³⁵
- Social Security is a lifeline for older workers who have serious health problems, difficult jobs or major work disabilities, among whom immigrants are disproportionately represented.³⁶ Nearly 6 in 10 (55.7 percent) immigrant workers aged 58 or older work in physically demanding jobs or difficult conditions, compared with 4 in 10 (43.8 percent) native-born workers.³⁷
- An analysis by the Office of the Chief Actuary of the Social Security Administration shows that providing a path to citizenship for the country's 11 million unauthorized immigrants would net Social Security \$284 billion by 2024, and extend Social Security's full solvency by two years.³⁸

SUSIE, North Dakota

Susie worked with her husband in their family shoe store for more than 22 years.

"That's how we made our living," she says. "We made about \$100,000 a year during good years. It wasn't all profit, we also had expenses but we got by." And even though her husband passed away 19 years ago, she's reminded of their sacrifices and successes when she receives her earned Social Security and Medicare.

She began work as a waitress at 14 years old in tiny Reeder, North Dakota. From there she maintained a series of jobs including later on, at her own shoe store. Today, she receives about \$700 a month from Social Security along with support from Medicare. Even in Dickinson, the money doesn't go far. "I'm on both Medicare and Social Security, and together they pay less than I earned when I worked," Susie says.

At 68 years old, Susie has the benefit of hindsight when she surveys her life and the lives of other seniors. When asked how she feels about some who say seniors could afford to get by on \$50 less each month if Social Security were cut, she has a stark reminder for younger generations: "Yes, \$50 is a big deal! That means that I will have to drastically cut my food budget. It's already being cut as we speak. I don't even do entertainment out of the house anymore, because I can't afford it. My way of living has been reduced dramatically."

Social Security Works for Same-Sex Couples and Their Families

Social Security has generally looked to state law to determine who is married. Until recently, however, the federal Defense of Marriage Act and state restrictions on the right of same-sex couples to marry prevented same-sex couples and their families from obtaining all of the Social Security protections provided to different-sex married couples and their families. With the Supreme Court's historic rulings in *U.S. v. Windsor* (June 26, 2013) striking down the Defense of Marriage Act, and in *Obergefell v. Hodges* (June 26, 2015), affirming the constitutional right of same-sex couples to marry in all states, federal marriage benefits and protections are now available to all same-sex couples, regardless of state of residence.

Married same-sex couples and their families in every state will now be able to claim the same spousal, survivor, and young dependent benefits guaranteed to all other married couples and their families.³⁹ Social Security's crucial protections will potentially benefit thousands of Americans, including:

- the 390,000 same-sex couples who are currently married under state law;⁴⁰
- the estimated 70,000 same-sex couples in the 13 states that did not previously recognize or allow same-sex marriage who are expected to marry in the next three years;⁴¹
- the estimated 210,000 children being raised by same-sex couples.⁴²

Social Security is Fiscally Responsible and Affordable

A public trust, Social Security is the nation's most conservatively financed and carefully monitored institution. Social Security does not, and, by law, cannot add a penny to the federal debt.⁴³ While the federal budget has run a deficit in every year but five over the last half century, Social Security is not allowed to pay benefits unless it has the funds to cover every penny of the cost; it simply does not have borrowing authority.⁴⁴ This is why Social Security has nothing to do with reducing the federal budget deficit, and should not be part of any deficit reduction legislation considered by our nation's leaders.

It is only because Social Security is required to project its finances 75 years into the future—an extremely long projection period by virtually any measure—that we even know about its modest long-term shortfall.⁴⁵ The 2015 report, signed by Social Security's trustees—the secretaries of the Treasury, Health and Human Services and Labor, the Commissioner of Social Security and two Public Trustees appointed by the President—projects that Social Security can pay all benefits in full and on time for 19 years.⁴⁶ After that, if Congress were not to act, it could still pay 79 cents of every dollar of earned benefits.⁴⁷

Social Security's projected shortfall is incredibly modest as a share of the economy. Even with the retirement of the baby boomers, Social Security's costs are projected to go from their current level of 5.0 percent of gross domestic product (GDP) to 6.1 percent in 2037, after which they are projected to fall and then rise again gradually to 6.2 percent in 2090.⁴⁸ The cost of bringing Social Security into actuarial balance is equal to roughly 1 percent of GDP.⁴⁹ This increase in Social Security spending is smaller than the increase in spending on public education that occurred when the boomers were children.⁵⁰

Rising Inequality Calls for Scrapping Cap, Expanding Benefits

While incomes at the top—from wages and investments—have skyrocketed in recent decades, the wages of the typical worker have stagnated: the median male worker earned roughly the same amount, adjusted for inflation, in 2010 as his predecessor in 1964.⁵¹ As a result, whereas from 1948-79 two-thirds of income growth went to the bottom 90 percent, from 1979-2012 *all* income growth has gone to the top 10 percent.⁵² In other words, since

RUBY, Arizona

I was born when Franklin Delano Roosevelt was elected into office in 1932, and three short years later he signed Social Security into law. I am retired now, so Social Security affects my life that way, but it also affected my life, and my children's lives, through survivors' benefits because we received benefits after their father died prematurely. It was a hunting accident. A guy across the hill from him shot, and my husband was hit, so I was left with the five kids.

It was such a shock that I didn't really know what I was going to do. It was really difficult. I got to the point where for three months, I could barely do anything and I finally had to go to the doctor. I could barely put one foot in front of me to physically walk to the doctor's office. I don't know what I would have done without Social Security. When I went to work, I only earned one dollar thirty cents an hour. It was tough but it was workable. Without Social Security I don't know how it would have been.

1979, the bottom 90 percent of households have, as a whole, seen their income decline in real terms.

While the lowest 94 percent of earners make Social Security contributions on all of their wages, millionaires and billionaires contribute on only the first \$118,500 of their earned income in 2015.⁵³ And their investment income is completely outside the Social Security system. The fact that virtually all aggregate income growth has been occurring above the Social Security tax cap has hurt Social Security's finances, and is projected to harm them even more in the coming decades.⁵⁴

We should not only scrap the cap, i.e. remove the limit on wages subject to Social Security contributions, but also incorporate high earners' investment income into Social Security. This would ensure that high earners contribute to Social Security on all their income at the same rate as average workers. And it would eliminate all of Social Security's projected 75-year funding gap, while providing enough revenue to expand benefits.⁵⁵ In addition or alternatively, dedicating revenue from the federal estate tax, our most progressive tax, to our Social Security system would also reduce income and wealth inequality while providing sufficient revenue to expand Social Security. It is important to recognize that the idea of a system of old age and disability pensions, financed from an estate tax, was proposed by one of our nation's Founding Fathers, Thomas Paine, over two centuries ago.⁵⁶

Social Security Must Not be Held Hostage to the Need for Fund Rebalancing by 2016

Though Social Security is a single program, its benefits are paid from two separate trust funds—the Old Age and Survivors Trust Fund (OASI) and the Disability Insurance (DI) Trust Fund. From time to time, the funds need to be rebalanced. This requires Congressional legislation. For long-anticipated, well-understood reasons, Social Security's actuaries project that a rebalancing between the two trust funds will have to be enacted before the end of 2016, to allow DI benefits to continue to be paid in full and on time.⁵⁷ Several major demographic shifts between 1980 and 2010 increased the size of the disability

MIKE, Ohio

Mike was a small business owner. He had his own home construction business. While on vacation in the Bahamas, he suffered a massive stroke. He was only 60 years old. Although he did receive some initial medical attention in the Bahamas, his family, through the help of friends, was able to charter a plane to bring him back to the States for treatment.

His stroke left him paralyzed on his right side and with aphasia, which means he could understand, but not speak. While most SSDI cases take a couple of years to get approval, Mike's case was so compelling, he was approved immediately. In the seven years since his accident, Mike has managed to go through his IRA, which he used to pay for unexpected medical expenses. If he did not have SSDI and now his Social Security retirement benefit, his family does not know what he would have done.

beneficiary population considerably. During that period, the working-age population increased by nearly half, resulting in more covered workers who might become eligible for DI. The Baby Boomers aged into their disability-prone years and this, together with lower birth rates in the generations that followed, shifted the population's age distribution, increasing the prevalence of disability. Finally, the growing number of women in the workforce since 1970 has resulted in a significant increase (from 50 to 68 percent) in the number of women insured for disability benefits.⁵⁸ The weak labor market and falling interest rates of the Great Recession compounded these strains on the system's finances, primarily by lowering the revenues coming into the system, as well as by reducing the interest earned on the DI Trust Fund's reserves. All of these trends which have hurt the disability fund's solvency are now projected to level off.⁵⁹

There is a simple way to extend DI solvency to 2034—by rebalancing the share of payroll contributions going into the Social Security retirement and disability trust funds, as Congress has done 11 times, in both directions, in the past.⁶⁰ This would guarantee workers' full suite of Social Security protections without affecting the system's overall solvency. Moreover, by scrapping the cap and incorporating high earners' investment income into Social Security, the solvency of both the DI and OASI funds could be extended to nearly the end of the century.⁶¹

MEDICARE WORKS

For half a century, Medicare has given seniors and people with disabilities access to efficient, affordable health care they can count on. It protects beneficiaries and their families against health-related expenditures that might otherwise overwhelm their finances. Even more importantly, it allows them to receive necessary—and often life-saving—medical care that many would otherwise not be able to afford.

For 50 Years, Medicare Has Provided Health Care in Retirement and Disability⁶²

As we celebrate the 50th anniversary of Medicare, it is worth reflecting on the difference it has made in our lives. Before Medicare, roughly half of the elderly were uninsured [Figure 5]. This is because private health insurance companies, which must generate returns for their shareholders, were not able or willing to insure seniors and people with disabilities at affordable rates,

given these groups' greater medical needs. Those who were insured paid nearly three times as much as younger people, even though they had, on average, only half as much income.⁶³

To prevent these growing health care costs from continuing to threaten the economic security of Americans in retirement, the Social Security Act was expanded in 1965 to include a health insurance program for the elderly, known as Medicare. Today virtually all Americans aged 65 and older have health insurance, predominantly through Medicare.⁶⁴

In 1972, Medicare was expanded to include people with disabilities under age 65 who receive Social Security Disability Insurance benefits. People with disabilities are eligible for Medicare after a two-year waiting period.⁶⁵ In 1963, before Medicare, only about

FIGURE 5
Americans 65 or Older with Health Insurance, 1963 vs. 2013

FIGURE 6
Americans with Disabilities with Health Insurance (All Ages), 1963 vs. 2013

Source: 1963: National Center for Health Statistics (NCHS), "Health Insurance Coverage: U.S.—July 1962–June 1963," August 1964. 2013: U.S. Census Bureau, "Age by Disability Status by Health Insurance Coverage Status," 2011–2013 American Community Survey 3-Year Estimates, 2013.

Note: The NCHS and U.S. Census Bureau both define disability as a chronic condition that impedes normal life and work activities. This definition is broader than the stricter definition used by Social Security and Medicare: inability to engage in "substantial gainful activity" as the result of a medical condition expected to last at least 1 year or end in death.

“[T]he later years of life should not be years of despondency and drift....Since World War II, there has been increasing awareness of the fact that the full value of Social Security would not be realized unless provision were made to deal with the problem of costs of illnesses among our older citizens.”

— LYNDON BAINES JOHNSON, January 7, 1965

half of Americans with disabilities (of all ages) had health insurance [Figure 6]. Today, 90 percent do.

If Medicare did not exist, many seniors and people with disabilities today would not be able to afford basic medical services. Medicare beneficiaries are mostly people of modest means. Half had annual incomes below \$23,500 in 2013.⁶⁶ Even with Medicare, more than one-third of the average Social Security check of retirees and their surviving spouses is consumed by out-of-pocket health care costs.⁶⁷

Medicare: One System with Four Parts

Medicare works—for seniors, people with disabilities, people with end-stage renal disease and people with ALS (Lou Gehrig’s disease). For all of these populations, the program covers needed hospital, physician, medical testing, pharmaceutical and rehabilitation services, as well as other necessary medical services and equipment.⁶⁸ Medicare provided health care coverage to 53.8 million Americans in 2014, of whom 84 percent (45.1 million) were aged

65 or older; and the remaining 16 percent (8.7 million) were severely disabled workers.⁶⁹ The average expenditure per Medicare beneficiary in 2014 was \$10,641.⁷⁰

Medicare consists of four parts, each of which provides different medical benefits or service delivery options. Medicare Part A, the Hospital Insurance (HI) program, covers hospital stays as well as select kinds of skilled nursing facility services and home health and hospice care. Hospital Insurance is earned during one’s working years, and paid for by insurance contributions of 2.9 percent of wages, divided equally (1.45 percent each) between employers and employees.⁷¹ Since 2013, households with income above the unindexed threshold of \$200,000 (\$250,000 for couples) pay an additional 0.9 percent Hospital Insurance contribution on their earned income (without an employer match). Medicare Part A’s funding is further supplemented by a portion of the federal income taxes that Social Security beneficiaries with incomes above certain unindexed thresholds pay on their benefits.⁷²

Medicare Part B, the Supplemental Medical Insurance (SMI) program, helps pay for physician care and related medical services including preventive care, lab tests, and durable medical equipment. One quarter of its costs are funded from premiums (generally deducted from beneficiaries’ Social Security checks), and three-quarters from general federal revenues.⁷³ The 5.5 percent of beneficiaries with incomes above \$85,000 (\$170,000 for couples) pay significantly higher premiums.⁷⁴ For low-income Medicare beneficiaries who are also enrolled in Medicaid, Medicaid can cover Medicare’s Part B premium and out-of-pocket costs. Low-income beneficiaries ineligible for full Medicaid benefits may qualify for one of several Medicare

Savings Programs, to help cover the cost of Medicare Part B premiums and cost sharing.⁷⁵

Medicare Part C, also known as the Medicare Advantage program, allows beneficiaries to enroll in a private insurance plan that covers Medicare Part A and B benefits (and usually Part D as well, described below). About 15.7 million Medicare beneficiaries were enrolled in Medicare Advantage in 2014—three in ten (30 percent) beneficiaries.⁷⁶ These private plans receive payments from Medicare to cover physician and hospital services (and in most cases, prescription drug benefits). Historically, Medicare Advantage plans have cost more for the same services as provided under traditional Medicare (Parts A and B).⁷⁷ Prior to passage of the Patient Protection and Affordable Care Act of 2010 (ACA), Medicare was paying Medicare Advantage insurance companies over \$1,000 per person more on average annually than traditional Medicare.⁷⁸ These extra costs resulted in not only higher government outlays but also higher Part B premiums for those enrolled in traditional Medicare. The ACA included provisions designed to bring the costs of Medicare Advantage closer to those of traditional Medicare.⁷⁹

Medicare Part D, the prescription drug benefit, covers most outpatient prescription drugs. Part D benefits are provided by private plans that contract with Medicare. Part D benefits are purchased by beneficiaries either as stand-alone plans, or as part of a Medicare

Advantage plan. In 2014, 37.6 million beneficiaries were enrolled in a Part D plan—7 in 10 (69.9 percent) beneficiaries.⁸⁰ The ACA ensures that seniors and people with disabilities in Part D who reach the prescription drug coverage gap, known commonly as the “donut hole,” receive discounts on brand-name and generic prescription drugs. This year, beneficiaries reach the coverage gap after spending \$2,960 on covered drugs, and the donut hole closes at the catastrophic coverage limit of \$4,700.⁸¹ On drugs purchased within the coverage gap, beneficiaries in 2015 only pay 45 percent of the price for brand-name covered drugs, and 65 percent for generic drugs. As a result of the ACA, these discounts will increase steadily until the donut hole is completely closed in 2020.

For most beneficiaries, roughly one-quarter of Part D costs are funded by premiums (generally deducted from beneficiaries’ Social Security checks), and three-quarters from general revenue. States are required to pay premiums for low-income beneficiaries who are enrolled in Part D programs. Assistance paying for Medicare Part D premiums and cost sharing is also available for eligible low-income beneficiaries through the Low-Income Subsidy of Medicare Part D (commonly known as Extra Help), a program administered by the federal government through the Social Security Administration. A small proportion—about 5 percent—of Part D beneficiaries with incomes above \$85,000 (\$170,000 for couples) pay higher premiums. Higher-income beneficiaries pay between 35 and 80 percent of Part B and D program costs, with the share rising with income.⁸²

Medicare Has Lower Administrative Costs than Private Health Insurance

Even though the traditional Medicare program (Parts A and B) covers people who, on average, have more health care claims and more expensive medical conditions than those covered by private insurance, its administrative costs are lower than those of private insurers. Traditional Medicare’s administrative costs were 1.6 percent of total expenditures in 2014.⁸³ Private health insurance’s administrative costs are generally much higher, for they include additional

non-medical expenses such as marketing, advertising and retained profit to insurers. The Congressional Budget Office (CBO) estimated that in 2007 these administrative costs varied from about 7 percent for large employer plans with 1,000 or more covered employees to as much as 30 percent for insurance sponsored by very small firms or purchased by individuals.⁸⁴

Traditional Medicare is also more efficient than Medicare Advantage plans. The Government Accountability Office (GAO) found that in 2006, Medicare Advantage plans' administrative costs averaged 16.7 percent.⁸⁵ The ACA stipulated that starting in 2014, Medicare Advantage plans could not devote more than 15 percent of their Medicare payments to administration, profits and other non-healthcare related items. In response, these plans are now becoming more efficient. A recent GAO study found that in 2011, Medicare Advantage plans' administrative costs had dropped to 13.6 percent—still far above those of traditional Medicare.⁸⁶

Medicare Controls Health Costs Better than Private Insurance As Well, Especially since ACA

In the United States, we pay far more for doctors, hospitals and pharmaceutical products than other countries. In 2011, we spent 17.7 percent of gross domestic product (GDP) on health care, compared to an average of 9.4 percent across all advanced economies.⁸⁷ Within our overpriced health care system, Medicare historically performs better than private insurance at controlling costs. For common benefits provided in Medicare and private insurance, from 1969 to 2013, per-person costs increased by 9.1 percent per year in private insurance, compared to about 7.5 percent in Medicare.⁸⁸ In the decade immediately prior to passage of the ACA in 2010, the costs of commonly provided benefits grew by 7.3 percent per enrollee per year in private health insurance, vs. 4.5 percent in Medicare. Figure 7 shows that since the passage of the ACA, which added many new cost-control provisions to our health care system, and particularly to Medicare, Medicare outperforms private health insurance even more starkly.

FIGURE 7
Average Growth Rate in Costs of Private Health Insurance vs. Medicare for Common Benefits per Enrollee, before and after ACA

Source: Centers for Medicare & Medicaid Services, National Health Expenditure Accounts, "NHE Tables" (accessed June 30, 2015).

Indeed, since passage of the ACA, Medicare's costs for commonly provided benefits per enrollee have risen at less than one-tenth the rate of private insurance. Part of this slowdown in cost growth is no doubt attributable to the Great Recession; but the recession began in December 2007 and officially ended in June 2009, while the stark decline in cost growth did not begin until 2010 and has persisted through the latest data available (2013). Hence much of the slowdown in cost growth cannot be explained by the recession; the ACA's numerous payment and delivery reforms have surely played a role in containing costs as well.⁸⁹

Tools in the ACA Must be Leveraged to Ensure Medicare's Long-Term Affordability

The Affordable Care Act is showing promising initial signs of bending the cost curve throughout our health care system, particularly in Medicare.⁹⁰ While the ACA has been implemented only gradually since 2010, the structural reforms contained in the law sent immediate signals to the health care industry that value, not quantity, would be rewarded in the post-ACA world,

particularly in the Medicare program.⁹¹ Physicians and hospitals, on the one hand, and Medicare Advantage plans, on the other, quickly began changing how they do business in anticipation of the new value-based system. (Insurers in the individual and group health insurance markets had to become more efficient as well.)

The ACA's cost-control provisions include measures to encourage provision of coordinated care for groups of patients (so-called Accountable Care Organizations, or ACOs); reimbursement of providers on the basis of expected costs for clinically-defined episodes of care ("bundled payments") rather than simply paying for each service billed ("fee-for-service"); reduction of excessive payments to private insurers who operate in Medicare Advantage; reduction of payments to hospitals with high rates of preventable readmissions; increased monitoring and punishment of waste, fraud and abuse; comparative effectiveness research to get a better sense of what works and what doesn't; and a new innovation center (the Center for Medicare & Medicaid Innovation), tasked with testing innovative payment and service-delivery models to reduce program expenditures while preserving or enhancing the quality of care.⁹² Each of these measures is likely to result in higher-quality care at lower costs over the long term. At a minimum, these innovations will inform ongoing initiatives to control costs and enhance health care quality.

In part as a result of the ACA, the Medicare Hospital Insurance (Part A) Trust Fund's solvency has been extended by 13 years, from 2017 to 2030, after which time it will be able to pay 86 percent of payments from current payroll contributions and other revenue in 2030, and 79 percent in 2039 and thereafter.⁹³ To express Medicare's finances another way, the total long-term shortfall in hospital insurance funding over the next 75 years is now less than one fifth as large as it was before the passage of the Affordable Care Act.⁹⁴

Still, Congress must pursue policies that sustain affordable access to Medicare benefits over the long term. In so doing, however, it must resist efforts to simply shift costs from the federal government to

beneficiaries. The most egregious of such proposals would replace Medicare with a voucher, as proposed in this year's House Republican Budget.⁹⁵ Without a strong public Medicare system, the cost of health care for seniors and people with disabilities would likely rise much faster than at present, and higher out-of-pocket costs could keep millions of lower and even many middle-income beneficiaries from getting the care they need.⁹⁶

Cutting Medicare benefits would simply shift costs to the sickest and oldest among us, forcing some seniors and people with disabilities to forego treatment, likely leading to more costly health care needs like emergency room visits, ambulance rides and hospitalizations, and worse health outcomes over the long-term. Promising proposals are available, however, to control Medicare's costs without shifting the burden to older adults and people with disabilities. For starters, Congress could allow Medicare to use its considerable market power to negotiate better prices for beneficiaries on prescription drugs. Currently, under the law that created the Part D program, Congress is forbidden from doing so.⁹⁷ Medicare's administrators are also *prohibited* by Congress from conducting cost-effectiveness research, the kind of research more efficient health-care systems around the world use to determine whether their money is being spent on care that actually works and improves upon existing treatments.⁹⁸

The bottom line is that substantial cost-savings are possible within our health care system without sacrificing quality or coverage. To this end, policymakers should continue to leverage the cost-control tools contained in the Affordable Care Act, and resist any efforts to shift Medicare costs to seniors and people with disabilities.

Medicare Works for Puerto Rico's Residents.

- Medicare insured 693,652 Puerto Ricans in 2012—1 in 5 (18.9 percent) residents [Figure 1].⁹⁹

Medicare Works for Puerto Rico's Residents with End-Stage-Renal Disease (ESRD).

End-stage-renal disease (ESRD) occurs when a person's kidneys stop functioning at a level needed for everyday life. People suffering from ESRD generally must undergo dialysis treatment or receive a kidney transplant, which are both prohibitively expensive.¹⁰⁰

Medicare Works for Puerto Rico's Residents with Amyotrophic Lateral Sclerosis (ALS).

Amyotrophic Lateral Sclerosis, more commonly known as ALS, or Lou Gehrig's disease, is a nervous system disease that gradually shuts down all muscles in a person's body, eventually resulting in death from respiratory failure.¹⁰¹ Many Puerto Rico residents with ALS would impoverish themselves or their families without the help of Medicare.

Seniors and people with disabilities cannot be economically secure if they are one illness away from bankruptcy. Medicare should be strengthened, not cut. As private-sector health insurance continues to rise in cost, preserving a strong public Medicare program is more important than ever.

CONCLUSION

We built our Social Security and Medicare systems because they are the most efficient, secure, universal and fair ways for Americans to achieve income security in retirement, and health security in retirement and disability.

As important as these protections are today, the need for them will only increase in the coming years. Income growth is, at best, slow for most of today's workers, and income inequality is higher than it has been in nearly a century. Jobs are less secure, and many workers have sustained substantial losses of home equity and other savings. Furthermore, most employers who historically offered supplements to Social Security have terminated traditional pension plans, replacing them with far more risky and inadequate 401(k)-style savings accounts.

Our nation faces an impending retirement security crisis. Workers today are saving no more at various ages than their counterparts did in 1983, even though they need much more, given that pensions are disappearing, out-of-pocket health-care costs are higher, and many are living longer.¹⁰² The typical household nearing retirement has only \$14,500 in retirement savings.¹⁰³ More than half (52 percent) of today's working Americans are not expected to have sufficient resources to maintain their standard of living in old age. The outlook is even more dismal when anticipated health and long-term care costs are counted; then, roughly two-thirds of working-age households are not expected to be able to maintain their living standard in retirement.¹⁰⁴

Were it not for Social Security and Medicare, the retirement security crisis awaiting today's workforce would be much worse. These programs are fortresses of security and reliability, and they work extremely well. In this uncertain world, where no one is invulnerable to premature death, permanent disability or poor health, Social Security and Medicare are there to cushion the blow. Their protections should be expanded, not cut.

These programs, like our highways, are fundamental to our family and community life. In an increasingly uncertain economic environment, they will be even more important to future generations of retirees—today's middle-aged and younger workers.

We are much wealthier as a nation than we were in 1935, 1939, 1956, 1965 or 1972, when these structures were built and improved. Now it is our turn to maintain and improve them, as previous generations have done, for ourselves and for those who follow. To build our own legacy for our nation's children and grandchildren so when they become workers, they will have the economic security that Social Security and Medicare provide.

Maintaining our Social Security and Medicare systems must not be reduced to a matter of simple arithmetic. Any changes we make to these vital programs must help advance their mission of providing economic security and dignity to the American people. Reducing expenditures in these programs is not an end in itself; doing so in ways that expose beneficiaries to economic insecurity or health risks would solve the arithmetic problem while compromising these programs' fundamental promise.

The solution is clear—it is time to double down on what works. We must expand Social Security and Medicare, in order to buttress retirement security in an era of wage stagnation and inequality.

At base, this is about what kind of nation we want to live in and leave for those who follow. Today's workers have a stake in preserving these foundational systems—for themselves, their families, and their children and grandchildren. And politicians have the opportunity to maintain, improve and pass on these paramount achievements for future generations, just as previous Congresses and presidents have done for us.

- 23 For the purposes of this analysis, “typical” is used to describe the “median” benefit. Monthly median benefit multiplied by 12 to calculate annual figure. SSA, *ibid.*, “Table 5.J6—Percentage distribution of monthly benefit for retired workers, by state or other area and monthly benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j6>
- 24 SSA, *ibid.*, “Table 5.J5.1—Number, by state or other area, and sex, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j1>. Percentage of women receiving benefits calculated using total female population from U.S. Census Bureau, “Annual Estimates of the Resident Population for Selected Age Groups by Sex for the United States, States, Counties and Puerto Rico Commonwealth and Municipios: April 1, 2010 to July 1, 2014,” *2014 Population Estimates*, 2015. <http://factfinder2.census.gov/>

25 Total spouses receiving benefits calculated by adding number of spouses of retired workers to number of spouses of disabled workers. SSA, *ibid.*, “Table 5.J2—Number, by state or other area, program, and type of benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j2>

26 SSA, *ibid.*, “Table 5.J2—Number, by state or other area, program, and type of benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j2>

27 Monthly median benefit multiplied by 12 to calculate annual figure. SSA, *ibid.*, “Table 5.J9—Percentage distribution of nondisabled widow(er)s, by state or other area and monthly benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j9>

28 The data here are for disabled workers receiving disability benefits. It does not include those disabled workers and “disabled adult children” who receive old-age (retirement) or survivors benefits. In this report, any use of the term “disabled worker” will refer only to those disabled workers receiving disability benefits.

29 SSA, *ibid.*, “Table 5.J2—Number, by state or other area, program, and type of benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j2>

30 Monthly median benefit multiplied by 12 to calculate annual figure. SSA, *ibid.*, “Table 5.J8—Percentage distribution of disabled workers, by state or other area and monthly benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j8>

31 In this case, “children” refers to individuals under age 18, and includes neither disabled adult children, nor individuals aged 18-19. When discussing Social Security’s insurance protections for children, children under age 18 was considered the most appropriate group to reference in this analysis, since even students aged 18-19 receiving benefits as dependents of a disabled or deceased parent must have qualified for benefits before age 18. While disabled adult children may receive benefits for a severe disability sustained at age 18 or later, it must occur before age 22, meaning that a large proportion of beneficiaries will likely have begun receiving benefits before age 18 as well. Population under age 18: U.S. Census Bureau, “Annual Estimates of the Resident Population for Selected Age Groups by Sex for the United States, States, Counties and Puerto Rico Commonwealth and Municipios: April 1, 2010 to July 1, 2014,” 2014 *Population Estimates*, 2015. <http://factfinder2.census.gov/>. Data on percentage of children insured from SSA, *Survivors Benefits*, July 2013, p. 4. <http://www.ssa.gov/pubs/EN-05-10084.pdf>

32 SSA, *Annual Statistical Supplement*, 2015, “Table 5.J10—Number of children, by state or other area and type of benefit, December 2014,” July 2015. <http://www.ssa.gov/policy/docs/statcomps/supplement/2015/5j.html#table5.j10>

33 U.S. Census Bureau, *2011-2013 American Community Survey 3-Year Estimates*, “Relationship to Householder for Children under 18 Years in Households,” 2014. <http://factfinder2.census.gov>

34 Latino and Asian American status are defined here by self-identification, not nativity, and “immigrants” refers to foreign-born residents of the United States refer to foreign-born Americans. ere by ethnicity, not nativity. e redistributive shifts in income from the bottom . U.S. Census Bureau, *American Community Survey 2011-2013 3-Year Estimates*, “Selected Characteristics of the Native and Foreign-Born Populations,” 2014. <http://factfinder2.census.gov/>. Social Security provided all or nearly all of the income for over half (52.6 percent) of Latino senior households, and more than 4 in 10 (44.4 percent) Asian senior households in 2012, compared with one-third (34.6 percent) of white senior households. 43 Social Security does not contribute to the deficit, because benefits can only be paid from revenue collected by the Social Security trust funds—the Old-Age and Survivors Insurance (OASI) trust fund and Disability Insurance (DI) trust fund—which are completely separate from the general budget. Social Security Trustees, *2015 Social Security Trustees Report*, July 2015, Table II.B1. <http://www.ssa.gov/oact/tr/2015/tr2015.pdf>. The trust funds do not have borrowing authority, and therefore cannot deficit-spend. In the event that trust fund revenues fall short of what is needed to pay 100 percent of benefits, then, by law, benefits could not be paid in full and on time. That is why, if Congress does nothing to shore up the program’s finances by 2034, Social Security will only have sufficient revenue to pay about three-quarters of scheduled benefits through 2090. This modest funding shortfall is often cited as evidence that the program is financially unsustainable, or “in deficit.” In fact, it is just the opposite: it attests to Social Security’s self-sustaining funding structure that bars it from deficit-spending or borrowing from the general budget in any way.

62 As discussed in more detail below, Medicare began covering people with disabilities in 1972, 43 years ago.

63 National Academy of Social Insurance (NASI), “Medicare Finances: Findings of the 2012 Trustees Report,” April 2012. http://www.nasi.org/sites/default/files/research/Medicare_Finances_Findings_of_the_2012_Trustees_Report.pdf

64 U.S. Census Bureau, “Health Insurance Coverage Status by Sex by Age,” 2011–2013 *American Community Survey* 3-Year Estimates, 2014. <http://factfinder.census.gov/faces/nav/jsf/pages/index.xhtml>. Of Americans aged 65 and older who received Medicare in 2012, 92.5 percent were enrolled in both Part A and Part B, while 7.5 percent were enrolled in Part A alone. Centers for Medicare and Medicaid Services (CMS), Medicare Enrollment - Aged Beneficiaries: as of July 1, 2012.” Accessed June 3, 2015. <http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/MedicareEnrpts/Downloads/12Aged.pdf>

65 People with ALS (Lou Gehrig’s disease) are not subject to the waiting period—they can go on Medicare as soon as they receive SSDI. People with end-stage renal disease do not have to be collecting SSDI in order to enroll in Medicare (but to be eligible must have some work history—either their own or through a family member); they also do not have a waiting period.

66 Kaiser Family Foundation (KFF), “Income and Assets of Medicare Beneficiaries, 2013–2030,” January 2014. <https://kaiserfamilyfoundation.files.wordpress.com/2014/01/8540-income-and-assets-of-medicare-beneficiaries-2013-e28093-20301.pdf>

67 Social Security Works, “Shifting More Medicare Costs to Seniors Is an Indirect Social Security Cut,” January 2014. http://www.socialsecurityworks.org/wp-content/uploads/2014/01/Shifting-More-Medicare-Costs-to-Seniors-Is-an-Indirect-Social-Security-Cut_Final-Jan-27.pdf

68 People with severe disabilities become eligible for Medicare coverage only after receiving Social Security Disability Insurance (DI) benefits for 24 months. People with End-Stage-Renal Disease (ESRD) and Lou Gehrig’s disease become eligible for Medicare as soon as they qualify for Medicare. KFF, *A Primer on Medicare: Key Facts about the Medicare Program and the People It Covers*, March 20, 2015. <http://kff.org/medicare/report/a-primer-on-medicare-key-facts-about-the-medicare-program-and-the-people-it-covers/>

69 Center for Medicare & Medicaid Services (CMS), “CMS Fast Facts,” April 21, 2015. <http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/CMS-Fast-Facts/index.html>. Not all Medicare beneficiaries were workers; a small share are people with disabilities who are eligible for Medicare on the work history and social insurance contributions of a parent or other family member, i.e. as a Childhood Disability Beneficiary (CDB) or as a disabled spouse of a deceased spouse. SSA, “Medicare,” July 2015. <http://ssa.gov/pubs/EN-05-10043.pdf>

70 Average expenditure per beneficiary is total Medicare benefit payments divided by the total number of beneficiaries. KFF, *ibid.*

71 KFF, *ibid.*

72 Up to 50 percent of Social Security benefits for couples with more than \$32,000 and singles with more than \$25,000 are subject to income taxes, the revenues of which flow into the Social Security trust fund. Up to 85 percent of Social Security benefits for couples with more than \$44,000 and singles with more than \$34,000 are subject to income taxes, and these additional revenues go to Medicare’s hospital insurance fund. Virginia Reno, “What’s Next for Social Security,” October 2013. https://www.nasi.org/sites/default/files/research/Whats_Next_for_Social_Security_Oct2013.pdf. The ACA also introduced the Medicare Net Investment Income Tax of 3.8 percent of the lesser of a household’s net investment income, or the amount by which its modified adjusted gross income exceeds \$200,000 (\$250,000 for joint filers). The revenues from this tax do not flow to the Medicare trust funds, however. Medicare Trustees, *2015 Medicare Trustees Report*, July, 2015. <http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/ReportsTrustFunds/Downloads/TR2015.pdf>

103 Nari Rhee and Illana Boivie, “The Continuing Retirement Savings Crisis,” National Institute on Retirement Security, March 2015. http://www.nirsonline.org/storage/nirs/documents/RSC%202015/final_rsc_2015.pdf

104 This is a conservative estimate. The Center for Retirement Research at Boston College estimated that in 2006, just before the Great Recession, 44 percent of working-age households would be at risk of downward social mobility in retirement, but this percentage rose to 61 percent when health care costs were included, and to 64 percent when long term care costs were counted—an additional 21 percent. In its 2010 estimate, which projected that 53 percent of households were at-risk of not being able to maintain their living standards in retirement, the Center did not include an estimate of the additional share of households that would be at risk if health and long-term care costs were taken into account. If this additional share were equivalent to the 21 percent it amounted to in 2006, then more than 7 in 10 households would be at risk after taking into account health and long-term care costs. Alicia Munnell et al., “Health Care Costs Drive Up the National Retirement Risk Index,” no. 8-3, Center for Retirement Research at Boston College, (February 2008). http://crr.bc.edu/wp-content/uploads/2008/02/ib_8-3.pdf; Munnell et al., “The National Retirement Risk Index: An Update,” no. 12-20, Center for Retirement Research at Boston College, October 2012. http://crr.bc.edu/wp-content/uploads/2012/11/IB_12-20-508.pdf

KEY FACTS ABOUT SOCIAL SECURITY AND MEDICARE IN PUERTO RICO

Social Security Works for Puerto Rico's Residents and Economy

- Social Security provided benefits to 845,860 Puerto Ricans in 2014, one-quarter (23.8 percent) of residents.
- Puerto Ricans received Social Security benefits totaling \$8.5 billion in 2014 [Figure 1 in full report].
- The average Social Security benefit in Puerto Rico was \$10,070 in 2013.

Social Security Works for Puerto Rico's Seniors

- Social Security provided benefits to 435,569 Puerto Rico retired workers in 2014, half (51.5 percent) of beneficiaries [Figure 3 in full report].

Social Security Works for Puerto Rico's Workers with Disabilities

- Social Security provided disability benefits to 179,266 workers in 2014, 1 in 5 (21.2 percent) Puerto Rico beneficiaries [Figure 3 in full report].

Social Security Works for Puerto Rico's Women

- Social Security provided benefits to 409,432 Puerto Rico women in 2014, 2 in 9 (22.1 percent) Puerto Rico women.

Social Security Works for Puerto Rico's Children

- Social Security provided benefits to 84,322 Puerto Rico children in 2014, 1 in 10 (10 percent) Puerto Rico beneficiaries [Figure 3 in full report].

Medicare Works for Puerto Rico's Residents

- 693,652 Puerto Ricans received Medicare benefits in 2012—1 in 5 residents.
