

STRENGTHEN SOCIAL SECURITY

...don't cut it.

Social Security Works for Latino Americans

Our Social Security system is neutral with regard to race and ethnicity, but because Latino Americans tend to have lower earnings over the course of their working years and little access to employer sponsored retirement plans, Social Security is particularly important to them. Even as our economy has improved, income inequality has been a critical issue in the Latino community. For many Latino Americans, the realities of a lifetime of low wages amounts to little or no savings for retirement. Therefore, Latino Americans disproportionately depend on Social Security to earn vital but modest retirement, disability, and survivors' protections for themselves and their families. Social Security should not only be protected for Latino Americans; it should be expanded.

Why Social Security is Important to Latino Americans

In 2012, 2.4 million Latino American households received Social Security benefits¹, including 3.2 million Latino seniors.² The median benefit received by Latino Americans age 65 and older in 2012 was \$13,199³—just \$2,029 over the federal poverty limit for an individual.⁴ Despite their modesty, these benefits are critical to the economic security of the Latino Americans who receive them. In 2012, Social Security made up half or more of the income of 73.8 percent of Latino Americans age 65 or older.⁵ In the same year Social Security also lifted 999,000 Latinos aged 65 and older out of poverty.⁶ Without these benefits the poverty rate among Latino American seniors in 2012 would have risen from 21 percent to 52 percent.⁷ In addition to its critical anti-poverty protections, Social Security has other features:

- Social Security's benefits replace a higher percentage of the incomes of lower earners. Although Latino Americans have seen a rise in median income, there has been a persistent racial income gap. In 2013, the median income of Latino Americans was 68 percent of the median income of white Americans (\$39,005 compared to \$57,009).⁸ Because of their lower earnings, Social Security's progressive benefit formula is especially important for Latino Americans.
- In addition to their lower lifetime wages, Latino Americans are less likely to own a home, which is a critical element of retirement security for households. In 2015, only 46.7 percent of Latino Americans owned a home in comparison to 72.2 percent of Whites.⁹ Consequently many older Latino Americans lean on their younger family members for support in retirement which can prevent younger generations accumulating savings of their own. Social Security's benefits are vital for older Latino Americans who want to remain independent in retirement.
- Latino Americans are also impacted by the costs of caregiving—21 percent of Latino Americans are caregivers.¹⁰ Latino Americans also spend more time (31.2 hours) each week caring for a loved one than other caregivers. Caregiving can have adverse effects on Latino American's lifetime earnings—approximately 6 in 10 caregivers report at least one change in their

employment situation (such as reduced hours or taking a leave of absence) due to caregiving.¹¹ Social Security's progressive benefits are vital to Latino Americans who provide unpaid care.

- Over the course of their working years, Latino Americans' lower earnings leave them less able to set aside savings for retirement. As a result, Social Security's benefits, although modest, are the most critical, if not the only, source of income for Latino Americans in retirement. In 2012, Social Security benefits represented 90 percent or more of the incomes of over half (52.6 percent) of Latino Americans aged 65 and older.¹²
- Social Security disability and benefits are critical for Latino Americans, who have higher incidences of disability disproportionately depend on Social Security. In 2013, 1.2 million Latino Americans received disability benefits.¹³ Of those receiving these benefits 64 percent of them depended on them for at least 75 percent of their income.¹⁴

To Improve Social Security for Latino Americans, Expand Benefits

Although Social Security benefits are vital to the Latino Americans who receive them, they are still too modest, and should be expanded. Fortunately, there are a number of policy options that would improve Social Security benefits for all Americans, including Latino Americans:

- *Increase benefits across the board.* Although Social Security benefits have substantially reduced poverty among elderly Latino Americans, these benefits are still too modest. There are a variety of proposals that would increase monthly benefits for all Americans progressively.¹⁵ Low-income beneficiaries, especially Latino Americans, would benefit most from such expansions.
- *Increase Social Security's special minimum benefit.* The so-called special minimum benefit was designed to prevent workers with many years of low earnings from retiring into poverty. However, the value of the special minimum benefit The Social Security Administration estimates that raising the minimum benefit to 125 percent of the monthly poverty level would increase the benefits of approximately 17 percent of African American beneficiaries ages 60 and older in 2030.¹⁶
- *Ensure that benefits keep pace with the cost of living experienced by Social Security beneficiaries.* Because Latino Americans depend on Social Security for a majority of their income and are more likely to become disabled, they especially rely upon Social Security's cost-of-living adjustments. However, the current index used to calculate these adjustments does not accurately reflect the higher health care costs experienced by seniors and people with disabilities.¹⁷ A more accurate cost-of-living index would ensure that Latino American's Social Security benefits do not erode over time.
- *Provide a caregiver credit.* Because Latino Americans make up a sizeable percentage of the nation's caregivers, their Social Security benefits are impacted by time spent out of the workforce to provide care to children and other family members. A caregiver credit would ensure that, even when Latino Americans and other workers forgo wages to provide unpaid care, their Social Security benefits will not be drastically reduced.¹⁸
- *Expand Social Security to include paid family leave.* Social Security was created to empower workers to insure themselves and their families against predictable, long-term periods of lost wages—retirement, disability, or the death of a working parent. However, many workers also experience temporary periods out of the workforce due to family caregiving duties and personal medical conditions. The expansion of Social Security to include family leave benefits would

ensure that workers, do not face economic insecurity during these temporary periods without wages.¹⁹

- *Eliminate the cap on payroll contributions and incorporate investment income.* Only 2.6 percent of working Latino Americans have annual incomes over Social Security's cap of \$118,500,²⁰ meaning that a majority of Latino Americans make Social Security contributions on all of their earnings, all year long, compared to millionaires and billionaires, who contribute on only part of their earnings and stop contributing earlier in the year. Eliminating the payroll cap and incorporating unearned income would not only close Social Security's long-range shortfall and help to finance benefit expansions;²¹ it would make contributions to the system more equitable for Latino Americans.

¹ The term "households" as it is used here refers to households reporting income in the past 12 months. Households receiving Social Security benefits are those households listed as receiving "Social Security income." U.S. Census Bureau, *2010-2012 American Community Survey 3-Year Estimates*, "Selected Population Profile in the United States," 2012.
